SongStorm

Scott Jacobson, Jay Wang, Eric Mariasis

The app allows for interactive scoring and composing on the 2D touch iPad surface. Its goal is to provide a digital surface that is convenient to use as a staff and more versatile than a pen and paper.

Open up a new song, and touch the notes on their desired location on the staff, part by part, until the song is composed.

A staff containing notes that is able to be edited on the fly will be visible in the "editor" window as well as something to select the current layer that is being edited. In the playback mode there will be a button to select which part of the song to begin playing from.

Functions to test:

* Filesystem to save and load scores

* Playback and delegation of parts with scroll views

* Touchcomposition®

* Editing notes that are already present

* Exporting to MIDI and/or PDF
